Checklist Examples

Hello this is normal text

Bla bla bla

- [ ] Buy milk
- [ ] Send the email
- [ ] Finish this package
- [x] Finish checklist support
- [x] Finish callout support

- Normal bullet (unchanged)

Code Examples

This is inline code `let a = 5` and we can also have blocks of code:

```
function hello() {
  console.log("hi");
}
```

```
import numpy as np
for n in range(3):
    v = np.ones((2, 2)) * n
    print(v)
```

Callout Examples

This is the default callout (no emoji) using Notion Gray background which is great.

Adeuuu
Tot genial oi que síiii?

💡 This callout has an emoji. The content is indented to the right, like in Notion.

- It can contain lists.
- Multiple paragraphs work too.

📘 This is a callout with blue background and a book icon. Both are optional.

A callout can contain more than one block like a heading
And of course the text can be **rich** text.

🛠️ Hola bon dia

🧪 Green background (Notion palette).

⭕ Red background (Notion palette).

This text is in the first column.

This text is in the second column.

Quote Examples

> This is a quote

> This is a quote that contains other blocks
>
> **Title 3**
> Greaaat
>
> - It works
> - Yes indeed

> This is a big quote

Auto-sizing for Equations

This text is separated into 2 columns to make clear that sometimes equations won't fit our document. In Notion they auto-size or horizontally scroll but here we will always need auto-sizing.

Consider as an example the following large equation which would normally not fit:

$$\psi_{n\ell m_\ell m_s}(\vec{r}) = N_{nl}\, r^l\, e^{-Zr/(na_0)}\, L_{n-l-1}^{2l+1}\left(\frac{2Zr}{na_0}\right)(r) Y_{\ell m_\ell}(\hat{\mathrm{r}}) \chi_{m_s}(\varsigma)$$

Here is auto-sizes to fit. This is enabled by default but can be disabled if desired.

Link Examples

All Links get decorated by default with blue text and underline.

This means child pages also get decorated:

📄 This is a child page

Page mentions also get decorated but also have italics like *This is a child page*.

Besides inline links we can also have bookmarks which are blocks.

The following is a bookmark:

This is a bookmark

This is a long description which corresponds to the open graph meta tag `description`.

https://examplewebsite.com/

All parameters in a bookmark (except the URL) are optional

This is a bookmark without image preview

This is a long description which corresponds to the open graph meta tag `description`.

https://examplewebsite.com/

Only the URL is mandatory

https://examplewebsite.com/
