Checklist Examples

Hello this is normal text

Bla bla bla

- [ ] Buy milk
- [ ] Send the email
- [ ] Finish this package
- [x] Finish checklist support
- [x] Finish callout support

- Normal bullet (unchanged)

Code Examples

This is inline code `let a = 5` and we can also have blocks of code:

```
function hello() {
  console.log("hi");
}
```

```
import numpy as np
for n in range(3):
    v = np.ones((2, 2)) * n
    print(v)
```

Callout Examples

This is the default callout (no emoji) using Notion Gray background which is great.

💡 This callout has an emoji. The content is aligned to the right, like in Notion.

- It can contain lists.
- Multiple paragraphs work too.

📘 This is a callout with blue background and a book icon. Both are optional.

A callout can contain more than one block like a heading
And of course the text can be *rich* text.

🛠️ One more example callout.

🧪 Green background (Notion palette).

⭕ Red background (Notion palette).
This text is in the first column. This text is in the second column.

Quote Examples

> This is a quote

> This is a quote that contains other blocks
>
> **Title 3**
> Greaaat
>
> - It works
> - Yes indeed

> This is a big quote

Auto-sizing for Equations

This text is separated into 2 columns to make clear that sometimes equations won't fit our document. In Notion they auto-size or horizontally scroll but here we will always need auto-sizing.

Consider as an example the following large equation which would normally not fit:

$$\psi_{n\ell m_\ell m_s}(\vec{r}) = N_{nl}\, r^l\, e^{-Zr/(na_0)}\, L_{n-l-1}^{2l+1}\left(\frac{2Zr}{na_0}\right)(r) Y_{\ell m_\ell}(\hat{\mathrm{r}}) \chi_{m_s}(\varsigma)$$

Here is auto-sizes to fit. This is enabled by default but can be disabled if desired.

Link Examples

All Links get decorated by default with blue text and underline.

Page mentions also get decorated but also have italics like *This is a child page*.

We can also have bookmarks which are blocks. The following is a bookmark:

This is a bookmark

This is a long description which corresponds to the open graph meta tag `description`.

https://examplewebsite.com/

All parameters in a bookmark (except the URL) are optional

This is a bookmark without image preview

This is a long description which corresponds to the open graph meta tag `description`.

https://examplewebsite.com/

Only the URL is mandatory

https://examplewebsite.com/

We can also have child pages like:

https://notion.so/30611a97-61ab-80fa-9156-c1501e88d148

We can also have embed elements, which are also blocks:

EMBED ELEMENT: ↗ https://example.com

And link previews, that we simply leave as a link just like embeds:

LINK PREVIEW: ↗ https://example.com

Table Examples

This is an example table with only row header:

Morning	Afternoon	Evening
Have breakfast	Go for a walk	Have dinner
Spend time with family	Bake a brownie	Read in bed

This is an example table with both row header and column header:

	Saturday	Sunday
Morning	Clean the room	Programming
Afternoon	Go to that birthday pary	Study *General Relativity*

Toggles

▶ This is a toggle

▶ **This is a toggle heading 3**

▶ **This is a toggle heading 2**

▶ **This is a toggle heading 1**

▼ This is a toggle

It can have children content

▼ **This is a toggle heading 3**

It can have children content

▼ **This is a toggle heading 2**

It can have children content

▼ **This is a toggle heading 1**

It can have children content

▼ **Custom section**

Nested content without indentation

Lorem ipsum dolor sit amet, consectetur adipiscing.

▼ **Custom section**

Nested content with indentation (default)

Lorem ipsum dolor sit amet, consectetur adipiscing.
